PERSONAL SUMMARY

Results-driven Software Developer with 13+ years of experience crafting sophisticated web applications in fintech, media, and data visualization. Specialist in microfrontend architecture and modern JavaScript frameworks. Known for delivering scalable solutions with a focus on performance and user experience. Recognized with multiple awards for technical excellence and innovation.

CORE SKILLS

Frontend: React.js, TypeScript, Angular, JavaScript (ES6+), knockoutjs, HTML5/CSS3

Backend: Node.js, Express.js, GraphQL (Apollo/Relay), Sequelize JS

UI/UX: Material UI, Styled Components, Bootstrap, Responsive Design

Data Visualization: Chart.js, D3.js, Google Maps API, High charts, DataTable

Testing: Jest, Enzyme, React Testing Library

DevOps: Jenkins, Docker, Kubernetes, AWS, S3, Git

Other: Microfront-end Architecture, Module Federation, Video Streaming, VideoJS, HLS streaming

AWARDS & ACHIEVEMENTS

AWS AWS Certified Cloud Practitioner
Impact Award, 2020 (JP Morgan)
Star Award, 2017 (L&T Infotech)
Team Award, 2016 (L&T Infotech)
BU Star Award, 2014 (L&T Infotech)

WORK HISTORY

Senior Associate - Palo Alto, CA | Bengaluru

JPMorgan Chase & Co. | July 2019 - present

- Developed scalable front-end applications with TypeScript, React.js, Relay, and GraphQL.
- Implemented micro-frontend architecture with single-SPA and module federation for modular and reusable solutions.
- Built UIs using Chart.js, Google Maps, Material-UI, and Styled Components.
- Worked on CMS integration using Strapi, enhancing content management workflows.
- Designed and developed a platform service for cross-team usage, improving development efficiency.
- Write tests with Enzyme, Jest, and the React Testing Library.
- Managed CI/CD pipelines via Jenkins and deploy with Kubernetes. Appplication deployment using AWS EC2.
- Designed and implemented Jenkins automation scripts using Groovy to configure environments, manage workspaces, and streamline ingress setup within a centralized repository.

Senior Technical Lead - New York City, NY

Point72 Assets Management | Nov 2018 - July 2019

- Developed dynamic and responsive user interfaces using Angular 7, LESS, and Angular Material UI.
- Built RESTful APIs with Node.js and Express.js, ensuring scalable back-end solutions.
- Implemented GraphQL APIs on top of a SQL database using Apollo Server 2, leveraging Sequelize with the Tedious client for efficient query generation
- Integrated Kafka for event-driven architecture and used the Morgan library for data usage logging
- Employed RxJS for handling asynchronous programming and reactive data streams.

ACADEMIC HISTORY

Bachelor of Engineering in Information Technology - Nagpur University 2008-2011.

Diploma in Information Technology- GP Nagpur 2005-2008.

Project Lead & Web Developer - New York City, NY

Viacom INC | June 2015 - Nov 2018

- Designed and developed the front-end of web applications utilizing technologies such as HTML5, CSS3, Knockout.js, AngularJS, ProUI, Bootstrap, and Font Awesome.
- Built a web-based video logger and thumbnail generator using native JavaScript and jQuery for enhanced functionality and user experience.
- Developed custom binding handlers with Knockout.js to streamline and enhance application interactivity.
- Integrated the VideoJS library to implement a media player, supporting multiple audio tracks and subtitles by optimizing M3U8 configurations.
- Conducted periodic functionality demonstrations for product owners, ensuring alignment with requirements and expectations
- Defined the high-level design and architectural framework for the application, ensuring scalability and maintainability
- Integrated Amazon AWS APIs for seamless video uploading capabilities
- Developed responsive web designs to ensure compatibility across devices, including iPads and iPhones.

Front end developer - Mumbai

Larsen & Toubro Infotech | March 2012 - June 2015

- Managed small modules by collaborating with peers to achieve required functionalities efficiently.
- Integrated Knockout.js with the DevExpress DXtreme mobile framework to enhance application performance and flexibility.
- Designed theme-oriented user interfaces optimized for various devices to ensure a consistent and adaptive user experience.
- Developed reusable code components by creating custom Knockout handlers and binding templates.
- Built an annotation tool enabling users to draw freestyle or predefined shapes on SVG charts and merge annotations seamlessly through SVG manipulation.
- Implemented 27 types of charts, including advanced reporting visualizations such as bubble charts, radar charts, point charts, and zoomable charts.
- Contributed to developing an OLAP Query Builder, capable of generating dynamic runtime queries to support complex data analysis.
